

Healthcare Booking Platform Development

Book a Doctor Platform • Folder 1: Project Initiation Phase

Project Lead:	Boya Praveen
Prepared By:	Uppara Ganesh
Project Team:	Boya Praveen, Shaik Baba Fakruddin, Uppara Ganesh, R Sai Ram, Saginala Sushma
Submission Date:	July 2026

Folder 1 Metadata & Registry

Registry Parameter	Value Specification
Project Stage	Folder 1 – Initiation & Scoping
Primary Objective	Requirement Gathering & Stakeholder Role Alignment
Development Status	Validated - Project Planning Phase Active

1. Project Executive Summary

The "Book a Doctor" application is designed as a centralized healthcare hub to streamline appointment management. By integrating patient discovery, secure scheduling, and notification automation, the platform minimizes logistical overhead for medical professionals while increasing accessibility for patients.

2. Core Functional Specifications

Module	Functional Focus
Provider Discovery	Browse and filter doctors by specialization.
Appointment Management	Schedule, reschedule, and manage medical consultations.
Document Security	Secure file uploads for patient medical history.

3. Technical & System Requirements

The project environment relies on a standard MERN stack configuration supported by cross-platform OS requirements.

- **Runtime:** Node.js (v16+) and npm (v8+).
- **Database:** MongoDB (NoSQL) for unstructured healthcare record scaling.
- **Development Tools:** Visual Studio Code, Postman for API validation, Git for version control.

4. Folder 1 Conclusion

Folder 1 documentation concludes the project initiation phase. Team assignments are aligned, and the core development prerequisites are established, moving the project to the design and architectural phase.
